Arch Linux RISC-V (东东、潘瑞哲) Cont.

- Linux & OpenJDK: manually bpo Linux patch for -w- mem page allocation; OpenJDK changed -w- to rw- at upstream (19.0.1.u10-2 works fine)
- Also Linux: bpo Ubuntu patch: [Force disable sv57](#)
- Also Linux: Disable VMAP_STACK in config
- Nodejs: v19 fails to build. Still investigating (need help)
- LLVM & Mesa OrcJIT:
 - Clang 14 with patch [D120001](#) bpo-ed to support R_RISCV_SUB6
 - Building mesa with patch [MR#17801](#)
 - Patch needs revision: <https://shz.al/RZkh>
- GCC libitm (experimental; ported from LoongArch). For gcc, link with -lstdc++
 - Test case: <https://shz.al/HwWX> build with g++ test.cpp -fgnu-tm
 - Patch is still under testing (not ready to be released), contact archriscv dev: github.com/xctan
- Systemd:
 - seccomp should allow syscall riscv_flush_icache, will be released in v252 (already in v252-rc)
 - build with LTO enabled: fixed by [PR#24632](#), will be released in v252

@Alex 我这边在打的时候遇到两个问题，一个是 <https://gitlab.freedesktop.org/mesa/mesa/-/commit/4c0a7a169dd3b929352d8c61f3e47abc2b5628ea> 和你的 MR 在 src/gallium/auxiliary/gallivm/lp_bld_init.c 文件存在冲突，一个是 ::gallivm_debug 在 DEBUG 宏未定义情况下报 expected) before numeric constant，这是因为 src/gallium/auxiliary/gallivm/lp_bld_debug.h 里面在 #ifndef DEBUG 情况下 gallivm_debug 是 #define 为 0 导致 ::gallivm_debug 变成 ::0
